Top Lithuanian startups to watch.

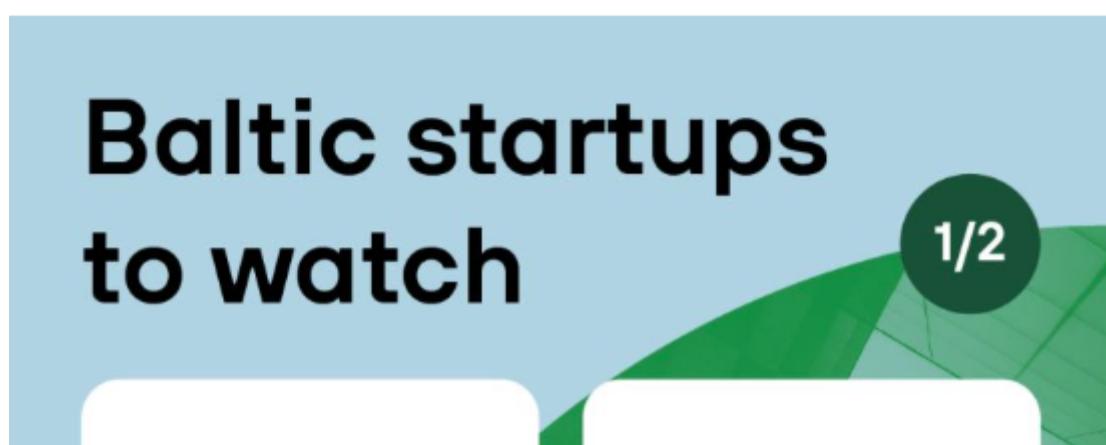

In the first half of 2025, Lithuania's startup sector grew fivefold compared to the same period last year. With most of the momentum coming from AI, DeepTech and fintech.

VC and tech accelerator **FIRSTPICK** has spotlighted its top startups to watch:

- nexos.ai** – an AI platform helping enterprises manage LLMs under one unified system.
- sintra.ai** – the world's first AI digital assistant for small businesses, covering tasks from sales to recruiting.
- InSoil** – a climate finance startup supporting regenerative agriculture with funding, technical guidance and monitoring.
- Turing College** – a home-grown edtech success story, launching careers in data and tech.
- Biomatter** – a synthetic biology company designing new proteins for health and sustainable manufacturing.

These players show how quickly Lithuania's startup scene is evolving.

Which of these startups will make the biggest leap by 2026?

3. Concerned about this one.

🔥 Truth bomb: AI doesn't fix bad data. It just dresses it up.

👉 Just look at the image,

It says it all, every layer of AI makes the garbage look fancier, but it's still garbage.

🦄 Why the unicorn?

Because Generative AI is brilliant at making garbage look magical.

It can spin poor-quality data into dazzling text, beautiful visuals, or clever code. But if the source is rotten, all you've really got is rainbow-painted nonsense.

🤖 And Agentic AI?

That's where it gets serious. It doesn't just make the unicorn.

It takes garbage, scales it, automates it, and spreads it faster than you can blink.

Bad inputs become amplified decisions, automated workflows, and multiplied risks.

👉 The lesson is simple: Don't chase the unicorn. Fix your data first.

AI is not a shortcut around data governance, quality, and trust.

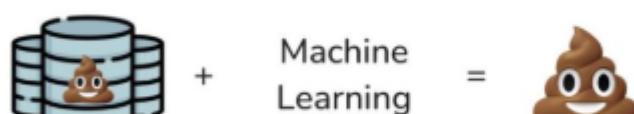

It's a multiplier. And what it multiplies depends entirely on what you feed it.

So I'll leave you with this:

How is your organisation ensuring that your unicorns aren't just rainbow-sprayed

💩?

Crafter Breakfast is Volkswagen Baltics' way of bringing the new Crafter directly to customers — over coffee, conversations, and real-life test experiences right at their workplace. It is a format designed to make exploring a vehicle more personal, relaxed, and relevant.

At the beginning of September, our colleagues [Edgars Bāliņš](#) and [Paulius Černiauskas](#) visited [Mobire](#) Latvia with the Crafter, giving their team the chance to experience it up close and ask questions in an informal setting.

We also asked [Jānis Trēzinš](#), [Mobire](#) Latvia Regional Manager, to share his impressions of this approach to customer engagement—and the feedback confirmed how powerful it is to meet people where they are.

For us at [Moller Baltic Import SE](#), Crafter Breakfast highlights what modern brand experiences should be about: simple, human, and built around genuine connection.

5. Long dash, tripple bullet. Ai like icon sused.

Work shouldn't feel like a grind. It should feel like progress. 

That's why we build AI helpers that make the hard stuff easy—so small teams can move faster, stay consistent, and actually have fun growing.

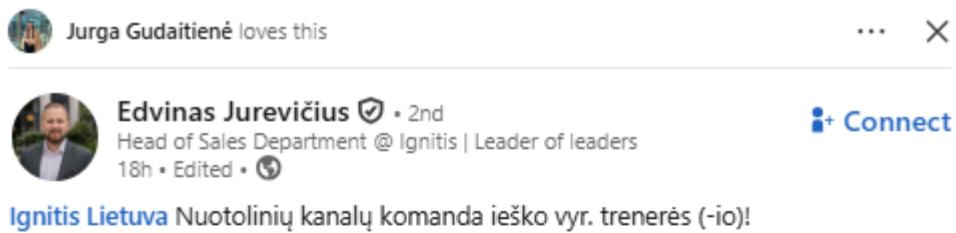

Quick wins we're seeing:

- 3x faster content drafts
- Fewer context switches = more deep work
- Happier customers with 24/7 support

Ready to make work feel like play? Let's build smarter, not busier.

[Ignitis Lietuva](#) Nuotolinių kanalų komanda ieško vyr. trenerės (-io)!

Nuotoliniuose kanaluose būsi atsakinga (-as) už:

- 👉 Kontakto centro ir telemarketingo veiklą
- 👉 Trenerių štabą (atsakingų sričių vadovus)
- 👉 Komandos komplektaciją ir individualius treniruočių planus (žmonių ir jų kompetencijų ugdymą)
- 👉 Puolimo derinius ir gynybos schemas (klientų aptarnavimo strategijos kūrimą ir įgyvendinimą)
- 👉 Ilgalaikius ryšius su partneriais (tieki Kontakt centro, tieki Telemarketingo veikloje)
- 👉 Vaizdo peržiūras ir rungtynių plano parengimą (veiklos rodiklių analizę ir savalaikės plano korekcijas)

Kviečiu patyrusius lyderius kandidatuoti ir prisijungus drauge kurti aukščiausio lygio klientų aptarnavimo standartą. 🤝

Daugiau apie poziciją - komentare žemiau.

Pasaulis keičiasi sparčiai, o kartu su juo – ir mūsų, vidinės komunikacijos specialistų, darbas.

Šikart bendruomenės renginyje kalbėjome apie naujienas vidinės komunikacijos pasaulyje ir tai, kaip **sintra.ai** dirbtinio intelekto agentai gali tapti mūsų naujais kolegomis – rašančiais, analizuojančiais ir padedančiais sudėtingą informaciją paversti paprasta, suprantama kalba darbuotojams.

💡 **sintra.ai** – lietuvių sukurtá DI platforma, kurioje jau veikia 12 agentų. Jie padeda organizacijoms jvairose srityse: nuo tekstu kūrimo ir socialinių tinklų administravimo iki klientų aptarnavimo bei kitų kasdienių užduočių.

Mūsų renginyje iš arčiau pažinome du, kurie gali būti puikiais pagalbininkais vidinėje komunikacijoje:

- 🤖 Penn – AI copywriter'is, rašantis tavo organizacijos tonu. Per kelias minutes paruošia pranešimus, naujenlaiškius ar net dešimtis antraščių.
- 🤖 Buddy – analitikas, paverčiantis tyrimų duomenis ar sudėtingus pokyčius aiškiomis, suprantamomis žinutėmis darbuotojams.

👉 Plačiau apie **sintra.ai** ir jų agentus: <https://sintra.ai/>

➡️ O mūsų renginių kelionė toliau tėsiasi - atidarėme išankstinę rezervaciją į kitą online susitikimą su **Bolt**. 🚚

Apie tai, kaip kurti ir valdyti vidinę komunikaciją tarptautiniu mastu augančioje organizacijoje, pasakos **Mathis Bogens**, **Bolt** Vidinės komunikacijos vadovas.

- 📍 Online | Spalio 14 d. | 10:30–12:00 val.
- 👤 Susitikimas vyks anglų kalba | Renginys nemokamas
- 📅 Registracija: <https://shorturl.at/Qd1pM>

Iki pasimatymo! 🌟

Let's talk about something juicy - data pipelines for AI systems!

Both ETL and ELT are data integration processes, but they differ in when and where data transformation happens, and it does matter.

ETL is great for applications like:

- classical ML models,
- healthcare & finance AI,
- Edge AI & IoT

...

Basically, structured, rule-based AI systems need strict compliance.

On the other hand, for AI applications like

- LLMs & GenAI models,
 - autonomous systems,
 - recommendation engines,
 - real-time analytics,
- ... **ELT** is the way to go.

It can handle massive, unstructured, and fast-changing datasets while allowing flexible, large-scale data processing with real-time adaptability.

Nowadays, **hybrid ETL/ELT** approaches are becoming more common, especially in AI-driven workflows where different types of data need different processing strategies.

For example, in LLM Training Pipelines (e.g., GPT, Claude, Gemini):

- ETL is usually used for structured metadata (e.g., labeled datasets, preprocessed embeddings).
- ELT handles raw text, images, and video (e.g., storing unstructured data first, then processing it as needed).
